INTEGRATED access control

Protect and manage your facility with confidence
In the past, a sturdy lock was the most effective method available to control access to your facility. Today you have the capability to truly manage both exterior and interior access. With the appropriate security devices and alarm management software in place, you can take control of who goes where and when in your facility with a single integrated security solution.

As a network application, real-time changes can be made to the access rights of any individual from anywhere with an Internet connection. Rather than worry about retrieving keys from discharged employees or re-keying locks, simply delete their access privileges. You can also remotely lock and unlock any protected door.

Adding to the benefits of an access control system is the ability to review reports detailing the arrival and departure of each individual. You will know which protected areas they entered. An access control system not only provides added security, but also enhances your facility management capabilities.

The main component in any access control system is the control panel. It communicates with and manages the various other devices installed throughout the facility. ABC Security systems include an “integrated” panel that also provides intrusion and fire alarm capabilities, all in a single unit.

The primary devices in an access control system are:

**Electronic Hardware:** Each protected door needs to be equipped with an electronic lock that can be remotely controlled.

**Readers:** Card readers where users swipe their cards, or proximity devices that users pass their fobs or access cards over.

**Keypads:** Where users can enter an access code to open a door, and system managers can modify the authority level of system users, as well as perform other programming functions.

**Request-to-Exit Devices:** Motion sensors, buttons or crash bars used to bypass a door or release an electronic lock.
The hardware is only half of your access control system. **ABC Security** also provides the access and security management software required to configure, control and maintain the system. When selecting your software, we offer you several options.

**System Link™:** Remotely monitor and manage your system from any Internet-connected PC using familiar drop down menus and screen interface. Check system status, arm and disarm the system, add and manage users, and more.

**Entré™:** Create graphical “maps” of your facility. Each system device is displayed on the map, providing at-a-glance status review. Zoom in to any part of the facility for more detail. Click on any device to check or change its status, making access control easier and more intuitive than ever before.

Multiple software versions and a variety of add-on modules let you select the features needed to build a system customized to your requirements, and ensure that you will never outgrow your system.

Advanced users can program automated system actions, including responses to any system alarm or events, customized reports, or alert distribution via email. This automation enables you to configure unattended activities, freeing system managers from many routine responsibilities.

**Managed Access and Security Control Services:**
You can rely on ABC Security as the around-the-clock facility monitor of your Access and Security system.

Your security professional can provide 24/7/365 oversight of your facility that ensures a fast, appropriate response to alarms, and quick updates to user data or system configuration. They can provide full reporting of all system activity, including information regarding all movement in and around your facility.

Rather than having multiple systems for access control, intrusion and fire, you can create a single, total security solution. An integrated system is less costly to install, reducing your initial investment. It provides continued savings because a single-system approach means less maintenance and reduced training for your staff.

The access and security management software provides the ability to incorporate all elements of your security system, including badging, CCTV camera control, and DVR management. The software consolidates all security management into a single unified solution.

**ABC Security** technology is designed with broad forward and backward compatibility. With ongoing upgrades and system enhancements, the system you buy today will continue to provide reliable service for many, many years.
