

## SCHEDULES

Schedules allow you to automate tasks like arming or disarming your system, activating favorites, or toggling outputs at a specific time. In the following sections, you'll learn about types of schedules and the Schedules page in Virtual Keypad.

### TYPES OF SCHEDULES

**Arming Schedules (Permanent Schedules)**—Used for automatic arming and disarming and always occur at the same time until you change or delete them.

**Door Schedules**—A door is unlocked and locked according to a schedule.

**Extend Schedules**—Allow an authorized user to extend the present day's permanent scheduled closing time.

**Favorite Schedules**—Used to schedule automatic activation of Z-Wave favorites.

**Output Schedules**—An output is turned on or off according to a schedule.

**Sunrise/Sunset Schedules**—Use the system's zip code to stay synced with sunrise and sunset times throughout the year. You can use the Virtual Keypad app to add this feature to Favorite, Output, and Time schedules. If you would like your devices to activate before or after the default times, enable the offset feature and specify an amount of time for the offset. This feature is available for Android and iPhone users.

**Temporary Schedules**—Allows you to enter a Begin and End time, as well as a Start and End date. It expires at the set End date and is automatically deleted from the system.

### TERMS

- 1 NAME** - Customizable name for quick and easy recognition.
- 2 NUMBER** - Assigned for panel's use.
- 3 TEMP** - Set the schedule to be temporary.
