734N and 734N-POE Version 105

Effective June 4th, 2020, all 734N and 734N-POE Access Control Modules are shipping with firmware Version 105 (5/13/20). The following feature is available:

Store Events Locally

When communication is lost with the panel, 734N and 734N-POE Access Control Modules store access granted events locally in module memory. When communication is reestablished, stored events are sent and synced with panel events, then inserted into the event buffer according to the actual time when they occurred.

To enable local event storage, **CARD FORMAT** must be set to **DMP** or **CUSTOM** and **NO COMM WITH PNL** must be set to **SITE** or **ANY**.

Requirements

This feature requires XR Series firmware Version 202 or higher.

Obtaining the New Hardware

New 734N and 734N-POE Access Control Modules can be ordered by contacting DMP Customer Service at 1.866.266.2826 or by visiting buy.dmp.com.
