

## Version 107 Update

Version 107 (12/12/19) software is now available for download at [DMP.com/Dealer\\_Direct](https://www.dmp.com/Dealer_Direct). Effective April 13, 2020, all SCS-150 software will be manufactured with Version 107 software.

## Feature

### Output Raw CID (ContactID) String

This feature has been added to support the upcoming version 202 firmware of DMP Universal Communicators. This will allow the receiver to process Serial 3 messages received that contain CID (ContactID) event codes within the message. Upon receipt of those messages, it will process only the CID portion of the message out to the Central Station Automation.
