# Touchless
Technology
FOR EVERY PANEL

Keep your family and employees safe and secure.

Safety and Convenience

Touchless technology has gained popularity in recent years. When it comes to your security system we can help.

Our Touchscreen and Thinline keypads let you arm or disarm your system without touching the screen or buttons to enter your code. Just present your proximity credential to the keypad and eliminate the risk.

At home and work, credentials are a perfect tool to give employees, babysitters, after-hours cleaning services — anyone you authorize.

CREDENTIAL OPTIONS

Key Fob
Clips to a key chain or lanyard. LED confirms button presses. Also works as a panic button.

Prox Patch™
Attaches firmly to a cell phone, pager or car remote. Ultra-thin so you'll barely notice it's there. Only available from DMP.

Prox Card
Thin yet durable polycarbonate design the size of a credit card. Customizable with graphics or photo.

Prox Key
Small and convenient key-size design is always there when you need it, on your key ring.

PROXIMITY CREDENTIALS
If you're not yet using proximity credentials, you can choose from a variety of styles, all of which require no training to use. Plus, we're happy to program and mail your credentials to you, ready to use when they arrive.

VIRTUAL KEYPAD™ AND SIRI®
Rather than touching your security system's keypad, you can use your credential or your own phone. The next time you need to arm or disarm your system, use your Virtual Keypad app — or have Siri do it for you! Virtual Keypad can also activate your Favorites like locks, lights and thermostats. You can even program geofences on your cell phone to trigger your Favorites.

As our customer, you've taken the right steps to protect your home or business — please remember to take advantage of these and other touchless technologies!
