

New Features

Effective March 7, 2022, Dealer Admin has been update to Version 2.75.0.

Multi-Login Management

With Dealer Admin Version 2.75.0, dealers can enter the user's information with an email address that already exists in Dealer Admin so that the user can access all their systems at once under a single login. When the app user logs in to Virtual Keypad™, they can view all their systems under **Select System** and combine their systems on their own.

Virtual Keypad app users with access to systems managed by more than one dealer can log in to their systems using a single email and password. For more information about the changes to Virtual Keypad, see the [Virtual Keypad TU-1297](#).

Forgot Password Option

Additional security has been added to user password management. When a user is created in Dealer Admin, the user will receive an email to set up their own password. If a user later forgets their password, they will select **Forgot Password** which will send them an email that will direct them through the steps to update their password.
