

734 Series and 734N Series Update

Starting the week of April 4, 2022, the following access control modules are being shipped with this firmware:

- 734 Series: Version 106 (2/8/2022)
- 734N Series: Version 105 (2/8/2022)

WaveLynx OSDP Reader Compatibility

Because WaveLynx OSDP readers send data in packets with varying byte sizes, some access control modules would occasionally send a NAK message to the reader when a packet couldn't be properly decoded. We have improved module compatibility to adapt to variances in packet byte lengths.

Get the New Firmware

To update your access control modules with this firmware, log in to your [Customer Return Center account](#), submit an RMA to update to the newest version, then send your devices to the DMP Customer Return Center.

If you have questions or need help with your RMA, email CustomerReturn@DMP.com.
