

FEATURE UPDATE | SEPTEMBER 2022

New Features

Effective September 12, 2022, Dealer Admin is updated to Version 2.78.3.

Set Time and Date

Set Time and Date allows dealers to remotely set the time and date for their panels in the event that the time is not correct. On the **System Status** page, when selecting the \bigcirc icon, there will be an option to Set Time. Dealer Admin will reference the local computer's time and date to send to the panel. The panel will then set the time according to the GMT value in System Options.
