

New Features

Additional features and integrations have been added to Dealer Admin for the XV Gateway with AlarmVision™.

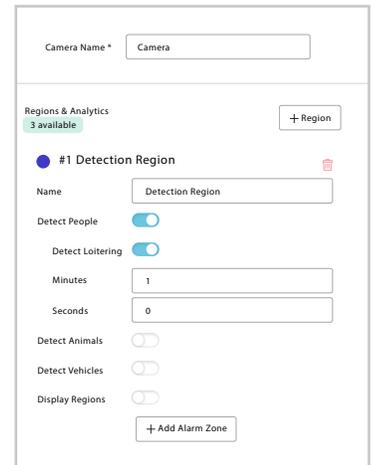

Features

Enable Loitering

This feature monitors how long a person is present in the XV Gateway's detection region. This feature is enabled on a per camera basis and can be configured under the **Camera Settings** page.

IMMIX Integration

This feature integrates the XV Gateway with the IMMIX online platform. Ensure the XV Gateway and the corresponding cameras are properly installed and communicating with the panel before starting the integration.

The screenshot shows the 'Camera Settings' interface. At the top, there is a 'Camera Name' field with the value 'Camera'. Below this is the 'Regions & Analytics' section, which indicates '3 available' regions and includes a '+ Region' button. The first region, '#1 Detection Region', is selected. Its configuration includes: 'Name' (Detection Region), 'Detect People' (checked), 'Detect Loitering' (checked), 'Minutes' (1), 'Seconds' (0), 'Detect Animals' (unchecked), 'Detect Vehicles' (unchecked), and 'Display Regions' (unchecked). A '+ Add Alarm Zone' button is located at the bottom of the region configuration area.
